LARGEST PIPE IN 40 YEARS OF MANUFACTURING

The GRP plant at Stanton Bonna is currently manufacturing the largest product it has ever made. The 2m long x 2m internal diameter GRP structural liners are being supplied to Yorkshire Water for a refurbishment project at Knostrop near Leeds in the United Kingdom.

GRP Production Manager, Gary Thornton, stated that there had been a number of operational problems that had to be resolved before the liners could be fabricated. Gary emphasised however, that safety issues were foremost in mind when resolving these problems.

GRP Commercial and Technical Manager, Glenn Paul, commented that the production team were to be congratulated for not only overcoming the problems encountered but also for producing a quality product with which the client was very satisfied.
