

# Stanton Bonna's Perfect Manhole Base

An off-site solution to awkward and often difficult wet-trade construction, Stanton Bonna's new Perfect Manhole Base enables contractors to rapidly install a thick-walled and watertight base to suit DN1200 and DN1500 manholes and all commonly used DN150-600 pipes.

Eliminating the need for labour-intensive concrete-benching, the Perfect Manhole Base can be installed in minutes rather than days – making big savings on man-hours and materials, as well as meeting new demands for improved health and safety, quality and construction speed.

With no need for concern about the typically difficult wet-trade conditions that can result in integrity failures, the Perfect Manhole Base can be confidently installed to a consistently high standard.

Complete with factory quality controlled benching and connections that require no extra finishing on site, this faster, safer and sustainable Stanton Bonna product is already gaining official approval from water companies.
